

(PALS)NEWBURY CREEK SALVAGE AND THINNING

Project Type	Other
Lead Implementer	U.S. Forest Service
Primary Contact	None
Project Stage	Implementation
Duration	? - ?

Other

In the winter of 2007-08, windstorms resulted in approximately 76 acres of blowdown in second growth forest stands. The Olympic National Forest identified opportunities to treat second growth to enhance structural diversity, promote the development of late-successional stand characteristics, and capture the economic value of windthrown trees. This project approved implementation of salvage and thinning on 69 acres in the Newbury Creek drainage.
